# THE LEADERS IN CARBON FIBER SINCE 1995

Christensen Arms was born out of the aerospace industry.

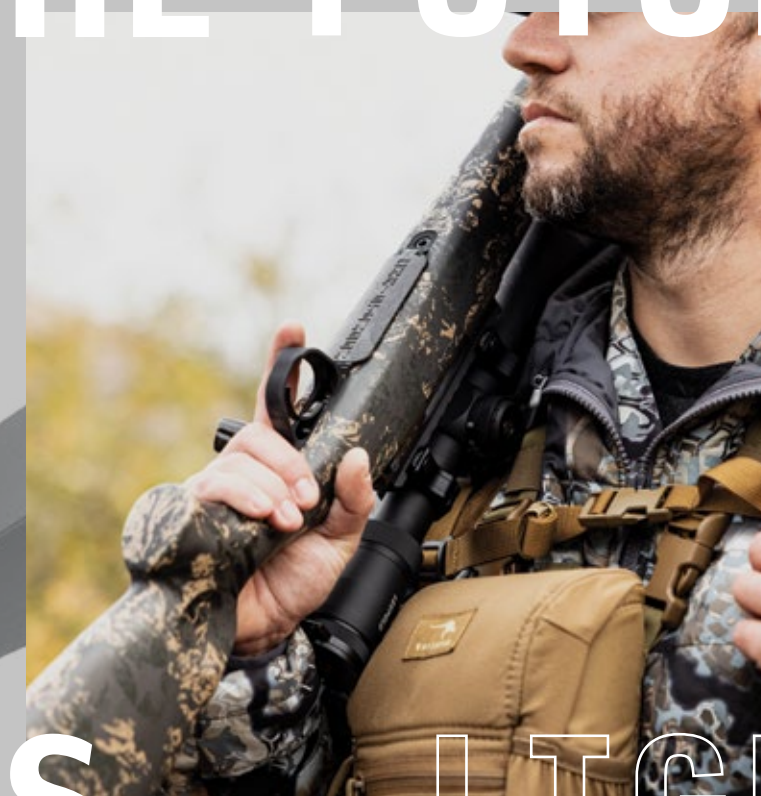

In 1995, Roland Christensen—a world-class engineer—used patented aerospace technology to create the world's first carbon fiber rifle barrel. Nearly three decades later, Christensen Arms continues to innovate, using advanced aerospace materials and processes to manufacture some of the most lightweight, precise, and accurate firearms in existence.

**Constructed utilizing the latest advancements in carbon fiber, Flash Forged Technology is light in weight and heavy on precision, strength, and innovation.**

When you pick up a rifle featuring FFT, you're not just holding a firearm—you're holding the future of carbon fiber. You have to hold it to believe it, so visit your local dealer to feel the FFT difference.

# THE FUTURE

# IS LIGHT

# FEATURES

PRECISION FOR THE PLANET

## CONSERVATION- CONSCIOUS TECHNOLOGY

FFT can be broken down and reused, allowing us to operate with less waste, harmful toxins, or emissions. This helps reduce our environmental impact to protect our lands and wildlife for future generations—all while putting a better product in your hands.

A SUPERIOR SHOOTING EXPERIENCE

## LESS WEIGHT, IMPROVED ACCURACY

With a sleek, aerospace-inspired monocoque shell design, FFT stocks eliminate up to a full pound of weight compared to traditional carbon composite rifle stocks. Rifles equipped with FFT help reduce physical stress and strain so you can hunt longer, hike further, and perform at your peak.

ENGINEERED TO PERFECTION

## HOLD THE FUTURE OF COMPOSITES

When we created FFT, we broke the status quo. Our FFT rifles not only exceed crucial strength and safety margins, they're also lighter, stronger, more durable, and more environmentally friendly than the competition. Because there are times to continue traditions—and times to break them.

HUNTING  
RIFLE

FEATURING

**fft**

FLASH  
FORGED  
TECHNOLOGY

The MHR would be considered lethal at first glance, but that's nothing compared to its performance at the range or on a hunt. Whether pursuing the trophy buck of a lifetime or ringing steel at the range, the MHR will exceed your wildest expectations. Visit your local dealer to hold the future of the hunting rifle in your hands.

# MODERN HUNTING RIFLE

## NEW PRODUCT

Designed to meet the unique requirements of every shooter and situation, the MHR is a versatile, modular, future-focused stunner. Built on an aluminum mini-chassis with V-block bedding, the MHR provides the accuracy potential of a chassis rifle and the ergonomics of a hunting rifle. And with interchangeable FFT stock, forearm, and grip variations, the MHR offers exceptional modularity.

## NEW PRODUCT

Aligning with the needs of every shooter and situation, the MHR Long-Action rifle provides the same versatility and modularity of its short-action counterpart. Built on an aluminum mini-chassis with V-block bedding, the MHR provides the accuracy potential of a chassis rifle and the ergonomics of a hunting rifle. The FFT stock, forearm, and grips can each be customized to fit any shooter situation.

# RIDGELINE FFT

NEW PRODUCT

When you hold the Ridgeline FFT in your hands, it's the weight—or lack thereof—that speaks for itself. Flash Forged Technology makes this the lightest gun you'll ever use. And because we care about every meticulous detail, the Ridgeline FFT also features a carbon fiber bolt knob and stainless steel side-baffle brake.

The Ridgeline FFT comes with the Christensen Arms Sub-MOA Guarantee. Select chamberings are available in a left-handed configuration.

# RIDGELINE SCOUT

The Ridgeline Scout combines all the best features of the Ridgeline into a new, compact scout rifle. Additional features include a Black-Nitride® coated action, 0-MOA optic rail, barricade stop, AICS drop-box magazine, and a flat-shoe Trigger Tech® trigger all in a tan and black carbon fiber composite Sporter Stock. The 16” barrel with a removable 3-prong flash hider make the Ridgeline Scout an ideal suppressor host.

NEW PRODUCT

A little less weight goes a long way — literally. When you’re packing a rifle up rocky backcountry hills, miles away from your truck, you’ll be glad for a gun that’s as light as your hunting boots. Starting at 5.5 pounds, the Mesa FFT combines a Flash Forged Technology stock, an ultralight contour stainless steel barrel with a Cerakote® finish and “seamless” removable radial muzzle brake, and it’s backed by the Christensen Arms Sub-MOA Guarantee.

Select chamberings are available in a left-handed configuration.

BLACK NITRIDE  
DESERT BROWN CERAKOTE CHASSIS

BLACK NITRIDE  
TUNGSTEN CERAKOTE CHASSIS

The Modern Precision Rifle with Flash Forged Technology is an ultra-lightweight chassis rifle designed to break tradition one day and build it the next. The MPR is the perfect rifle to transition between a backcountry hunt and a day on the range with family and friends. Beyond the folding stock, the complete package is well equipped with a target contour Christensen Arms carbon fiber barrel, carbon fiber comb, free-floating carbon fiber FFT handguard, standard AR-style grip, and a 20-MOA rail. The action and stainless steel side-baffle muzzle brake are finished in Black Nitride™. The Modern Precision Rifle weighs in starting at 6.9 pounds and is backed by the Christensen Arms Sub-MOA Guarantee.

# COMPONENTS

When we first developed the carbon fiber barrel, we knew it was going to become one of the most innovative advances in firearms in recent decades. Offering superior strength and rigidity over traditional heavy-profile barrels and the extreme light weight of light-profile barrels, our carbon fiber barrels are engineered and manufactured in house from aerograde materials to ensure they meet the same high standards and quality control you would expect from any product carrying the Christensen Arms name.

Our technology and aerospace pedigree guarantees precise measurements and verifications of twist rates that ensure a repeatable and highly accurate rifle. Every Christensen Arms chamber is CNC machined using minimum-diameter match-grade reamers and optimized for accuracy and performance. Our barrels are reamed and inspected to a tolerance of +/- .0002.

# REDEFINING THE STANDARD

## STAINLESS STEEL

Built using 416R stainless steel, our stainless barrels are precision machined to the industry's highest standards, button rifled, stress relieved, and hand-lapped.

## CARBON FIBER

Designed using precision engineering adopted from the aerospace industry, our carbon fiber barrels are crafted using a proprietary layered design that fully utilizes the strength and thermal conduction benefits of carbon fiber to achieve more consistent barrel harmonics and accuracy. The barrel lining is machined from 416R stainless steel and button rifled.

## FFT UPGRADE KIT

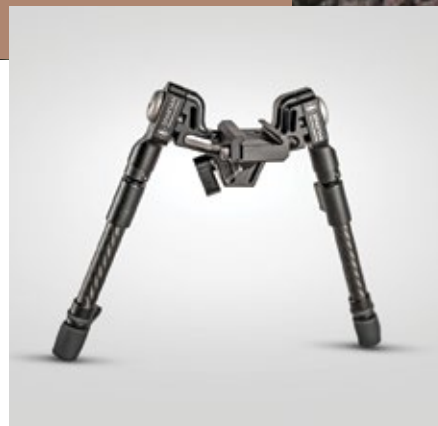

Improve your rifle with this FFT Upgrade Kit. Not only will this kit give your rifle a fresh new look, it will also shave off more than a pound in weight.

Compatible with Remington Model 700® actions.

## VALHALLA BIPOD®

Optimized to provide a light and incredibly stable platform for hunters and long range precision shooters in all environments, the Valhalla Bipod® attaches to tactical style rifles with Picatinny or M-Lok rails. It can be folded under the rifle or removed in an instant for storage and transport. With adjustment for cant, height adjustable spring-assisted tac legs can be altered with one hand and deploy in seconds with five pitch positions

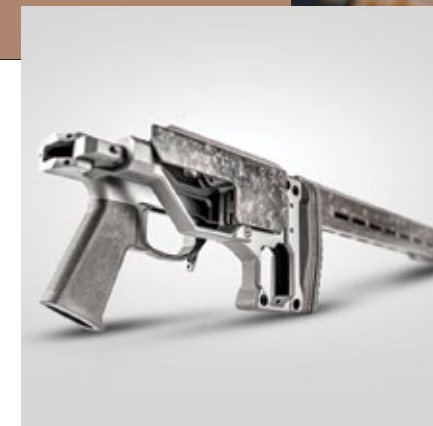

## TACTICAL PRSR-HD SCOPE RINGS

Whether chasing distant targets or trophy game, the TACTICAL PRSR-HD scope rings from Christensen Arms provide the most secure and advanced optic mounting platform available. The precision CNC-machined rings feature 6-bolt caps and a removable anti-cant bubble level to ensure shot-after-shot accuracy and unmatched performance.

## MPR CHASSIS

The right foundation matters. The Christensen Arms MPR chassis is the same ultra-lightweight adjustable system found on the Modern Precision Rifle, now offered as an individual component. Born of our obsession with carbon fiber and brought up by hand in the USA the platform delivers effortless form and function—all weighing less than 3.5 pounds. Currently available for Remington® 700 footprint short and long-action receivers.
